You're remarkable!

I cannot thank you all enough for your expertise, compassion and phenomenal teamwork for TLC bed 1. The pt came in extremely hypotensive and not intubated with only a triple lumen. Within 40min we managed to intubate, establish more IV access, insert an arterial line and rapid transfuse enough blood products to stabilize the patient and titrate off his high dose NE! Everyone assumed a role quickly & effectively while compassionately reassuring the oriented patient that we were doing everything we could to save his life. The patient came from a place of chaos and instability to a smooth, concise, compassionate team and it was obvious he found comfort in this fact. Thank you for your amazing teamwork in stabilizing him so that he could transfer to IR. I could not be more proud to be a member of this team!!
